I2BF and RUSNANO Capital announce Strategic Resources Fund

18 July 2012, Moscow / London – Rusnano Capital, the Russian government-owned nanotechnology investment company, and international technology investment group I2BF Global Ventures have announced the launch of the I2BF-RNC Strategic Resources Fund to invest in later-stage nanotechnology companies. The seven-year fund launches with a \$53m commitment from its LPs with a target fund size of \$150m. Its remit will be to invest in international nanotechnology that has applications of value within the Russian Federation, with a focus on the resource sector as well as water and agriculture.

“We are delighted to partner with Rusnano Capital on our first late-stage venture fund expanding on I2BF’s existing investment expertise,” says Ilya Golubovich, Managing Partner of I2BF Global Ventures. “It is important in a fast-maturing nanotech market that together we are now able to offer expansion capital to larger companies with proven technologies. The opportunities to roll out nanotech applications and also production facilities in Russia are widespread and we will be using our global footprint to channel the best technologies into this market.”

“Agriculture and water supply industries in Russia offer an immense source for growth,” says Irina Rapoport, CEO of Rusnano Capital. “We are planning to capitalize and develop those branches of the economy together with I2BF Global Ventures which has a unique combination of venture industry experience as well as a Russian edge.”

Nanotech applications are increasingly widespread in sectors as diverse as food and agriculture, consumer electronics, energy production and storage, and medicine. Nanoresearch firm Cientifica estimates that since 2000 governments have invested over \$65bn in nanotech research. Russia has been a leading player since the creation of Rusnano in 2007. Compound global growth rates in the sector are expected to hit 18% between 2010 and 2013. Part of the attraction of nanotech is increasing the efficiency of materials and processes in an increasingly resource constrained world.
